

ABSTRACT

An intravaginal washing agent by which the self-cleaning effect in the vagina of a patient suffering from a vaginal infection such as bacterial vaginosis, cervical chlamydiosis, trichomonal vaginitis or candidal vaginitis can be restored in the home, the invasion of bacteria, fungi, protozoa, etc. into the vagina can be prevented, and invading organisms can be exterminated. This intravaginal washing agent, which can be easily handled, has no toxicity and exhibits excellent effects, comprises a fermented soybean milk obtained by fermenting soybean milk by coculturing a plural number of lactic acid bacteria or an extract obtained by extracting the fermented soybean milk with an alcohol, in particular, over 6 month or longer.
